

Won-Door accordion partitions are a sound investment.

CASE STUDY

When Chaparral Elementary School was built in the late 1970s thirteen Won-Door DuraSound™ partitions were installed. As Poway Unified School District in Southern California discovered, the savings only began at installation.

During a recent modernization of the building, the facilities department found that none of the original DuraSound™ partitions needed to be replaced. Only service and the replacement of minor parts were required and the doors are expected to last at least another 20 years. In addition, looking back over the lifetime of the doors, the partitions had cost only pennies to maintain.

Won-Door DuraSound™ folding partitions:

- **Increase building utility**

Won-Door DuraSound™ accordion partitions have the highest sound rating (STC 48) in the industry. Unlike the competition, a pin and roller suspend every panel so operation is smooth and virtually effortless. This unique design allows the doors to span curved as well as wide span openings.

- **Are easy to install and maintain**

Won-Door DuraSound™ partitions are competitively priced, and less expensive to install and maintain. The DuraSound™ partition is easily repairable in place. Building maintenance personnel, using basic tools, can simply remove and replace any single panel, hinge or roller.

- **Last years longer than the competition**

Won-Door products are manufactured to last as long as – or even outlast – the buildings in which they are installed! Each vinyl-clad steel panel is corrugated for extra strength so it is dent, ding and scratch resistant. The air space between the two walls creates an effective cushion against even the most severe blows, allowing it to withstand a lot of use and abuse over the years – proving that the cost of any sound partition is not the purchase price, but the total outlay over its effective lifetime.
